Web Programming Midterm Group Project

Submission deadline: April 30, 2026 (NO EXTENSION)

For this group project, the group builds a website containing a *minimum of* **FIVE** webpages. Two of the pages must be the *homepage* and a *form* page. All other pages will elaborate detailed information about the website.

Each group will select **one** of the following seven themes to build the website:

- Restaurant
- Conference/workshop
- Travel agency
- Concert ticket hall
- Online course learning platform
- Gym membership
- Product retail store

This project is worth **200 points**. There are three parts to this project. First, the group completes a **project requirements document** (PRD). This is worth 80 points. The template of the PRD is enclosed in this exam as a DOCX file. After completing the PRD, the group can start building the website. The quality of HTML and CSS will be worth 80 points. Finally, JavaScript quality is worth 40 points. CSS and JavaScript must be externally stored in separated `css` and `js` folders. Media files (images, audio, video) should all go to a folder called `assets`.

The site structure should like this:

```
/          ← root
|— index.html       ← homepage
|— page2.html
|— page3.html
|— page4.html       ← one of them is the form page
|— page5.html
|— css/
    |— styles.css   ← CSS styles file
|— js/
    |— scripts.css  ← JavaScript file
|— assets/
    |— all media files here
```

The group can freely source out image assets from the internet to design its website.

Website upload instruction: GitHub is a free resource sharing site for projects and codes. Each group should sign up for a free GitHub account with a unique account `<username>`. Then, add a repository to store all the website source files. The repository name must be `<username>.github.io`. After that, the repository is ready for the group to post their website for free online. Visit https://docs.github.com/en/pages/quickstart to easily set this repository up and start uploading the website.

A sample is given below. DO NOT copy the sample. Design your own website.

Refer to the detailed rubric below for more precise grading criteria.

HTML + CSS (80 points total)

1. Site Structure & Navigation (15 points)
    - Consistent-looking headers across pages (2)
    - Consistent-looking navigation bars across pages (2)
    - Consistent-looking footers across pages (2)
    - Logical file organization (4)
    - Use semantic tags (5): to bold or emphasize text, use instead of CSS font properties. The reason is that search engines pick semantic tags to based on context. This applies also to other semantic tags like <article>, <aside>, *etc*.

2. CSS Styling & Layout (15 points)
    - Shared external CSS file (4)
    - Consistent visual theme (6)
    - Tidy and user-friendly layout (5)

3. Registration Form Elements (30 points)
    - Text inputs (2)
    - Email input (2)
    - Numeric inputs (2)
    - Radio group (3)
    - Checkbox group (3)
    - Select dropdown (3)
    - Textarea (3)
    - Submit button (2)
    - Reset button (2)
    - Relevant layout (8)

4. Footer & Back to Top Feature (10 points)
    - Footer present on all pages (4)
    - Meaningful footer content (2)
    - Functional Back to Top link on all pages (4)

5. Content Quality (10 points)
    - Meaningful content (5)
    - Theme consistency (5)

JavaScript (40 points total)

For the form page, every information given by the user, on form submission, are to be extracted using JavaScript and populated into a table. This table should be written into a fresh HTML page. The following criteria should be met (with *correct usage*):

- Event listeners (5)
- DOM API (5)
- Loops and conditionals (10)
- Table should contain a header and two data columns with all data filled (10)
- Adequate commenting (5)
- Code indentation (5)

PRD (80 points total)

The PRD is an essential document in planning, designing and building of projects. It contains The point breakdown is shown inside the `PRD.docx` template. Fill out **ALL** contents relevant to your group and replace italicized prefilled sample statements with the *correct details*. **DO NOT** alter nonitalicized contents. This document should be completed first (at least for the most part) before website building commences.

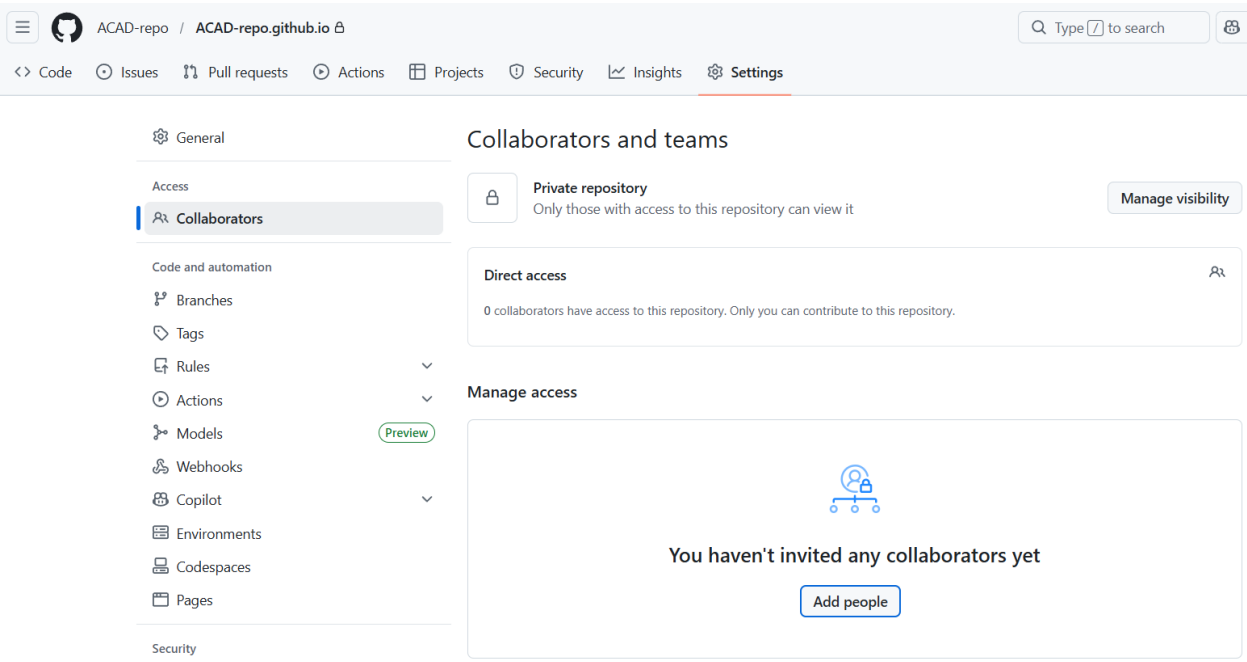
Part of the evaluation is to use Google Lighthouse to grade the performance of your website. After posting the website with GitHub Pages, you may easily employ Google Lighthouse using the Chrome browser **DevTools** by going to the **Lighthouse** tab.

Using the above settings (select *Desktop* under Device), click the **Analyze page load** button to start analyzing.

You should see the summary page. Click on the three dots next to the repo URL on the right panel and select **Print Expanded** to print the lighthouse report to a single PDF file.

Items to submit to ECAMPUS:

- **GitHub Page URL:** `<username>.github.io`
- **Git control:** After setting up the GitHub repository, go to the **Settings** tab under the GitHub repository and click **Collaborators** under Access. There you may add ys_teo@sejong.ac.kr in **Manage Access** (see screenshot)
- **PRD** (saved to PDF)
- **Lighthouse report PDF**



Additional maximum penalties:

- Presence of `<style>` and `<script>` tags in HTML (-20)
- Presence of style attributes in HTML tags (-20)
- Media not in assets folder (-20)
- External CSS/JS broken link(s) (-20)
- Broken media link(s) (-20)
- HTML, CSS or JS code error(s) (-20)
- Use `document.write()` (-20)
- Theme irrelevance (in relation to that reported in PRD) (-20)
- Poor user experience (in relation to that reported in PRD) (-20)
